NavigationWithResult

Usage

- Activity1:

Prepare laucher:

```
ActivityResultLauncher<Intent> launcher = registerForActivityResult(
        new ActivityResultContracts.StartActivityForResult(),
        new ActivityResultCallback<ActivityResult>() {
            @Override
            public void onActivityResult(ActivityResult result) {
                if (result.getResultCode() == Activity.RESULT_OK) {
                    Intent intent = result.getData();
                    String name = intent.getStringExtra("name");
                    helloText.setText("Hello "+ name);
                }
            }
        });
```

Start new activity with laucher:

```
launcher.launch(new Intent(MainActivity.this, SubActivity.class));
```

- Activity 2:

```
Intent intent = new Intent(SubActivity.this, MainActivity.class);
                intent.putExtra("name",nameET.getText().toString());
                setResult(RESULT_OK, intent);
                finish();
```
